

GEAR TABLE

THE PIECE YOU HAVE RECEIVED IS CRAFTED BY HAND,
MEANING NO TWO TABLES ARE ALIKE.

The handmade manufacturing process is what gives the table its unique expression - a decision intentionally made by our design team. Each table bears its own characteristics, with variations in the fluted surface, slightly visible mold lines, small holes or subtle unevenness on the edges, showing that all steps in creating the product involve hands. In the final stages, the table is hand-painted, a process involving four steps before reaching the final color, which adds to its distinctive look. Before being dispatched, each table undergoes a thorough quality check.

The Gear table is made of a composite material, with concrete and fibers mixed together, making it robust but also requiring careful handling. In the event that you accidentally create small scratches, the table comes with a repair kit, enabling you to paint over them using a small brush.

This piece is crafted with care, and we hope you will treat it the same.
